

Issues

Bureau of Land Management Price Management Area

The Price Management Area includes Bureau of Land Management lands in Carbon and Emery Counties. The area is regionally referred to as the Price River area, and San Rafael Swell, and contains about 2.5 million acres of land. Approximately 2.8 million acres of mineral estate land is also part of the management area.

What is the Resource Management Plan?

The Resource Management Plan is a land use decision-making document that provides guidance for management decisions in the area. The plan is created through an open, public process, utilizing the input from those who have an interest in these public lands, and the surrounding communities.

What will the Plan Address?

The plan will address the issues important for the use of the public lands. These issues will include how the land is used, what resources are available, and the activities available on these public lands. The Bureau of Land Management is relying on those with an interest in the area to help identify what is important about this area, so it can be addressed in the plan. Some potential issues could include:

Air Quality	Cultural Resources	Soil & Water Resources
Vegetation	Lands & Realty Management	Energy & Mining
Recreation	Wildlife Habitat & Fisheries	Visual Resources
Special Management Designations		Hazardous Materials

Other Issues? What can you think of?

Scoping Meetings - 2002 - Salt Lake City (Jan. 15), Moab (Jan. 16), Grand Junction (Jan. 17)
Green River (Jan. 29), Castle Dale (Jan. 30), Price (Jan. 31)
